# Connect N' Care™

Connect N' Care™ is a customizable telehealth platform that allows healthcare organizations to safeguard their healthcare workers during COVID-19 and deliver convenient, quality and cost effective care for their patients, regardless of where they are located.

Provider Benefits

The physician can easily diagnose, treat and prescribe from the convenience of their mobile device or PC remotely. Upon receiving notification of a new patient case, the assigned clinician can log on using the Connect N' Care app or web-based portal and review the SOAP notes, then proceed to do a quick video consult so they can "lay eyes" on the patient. At the end of the consult, the telehealth encounter can then be documented in the EMR using API's, HL7 or FHIR protocols.

Patient Benefits

Using the Connect N' Care app, your patients can report their symptoms through our built-in evidence-based guidelines, and have a HIPAA compliant video visit or phone call with the provider. Your patients can utilize the built-in personal health record capabilities to manage their medications, be reminded to take medications and be alerted to adverse drug interactions.

Connect N' Care

✓ Increase patient retention and revenue

✓ See more patients
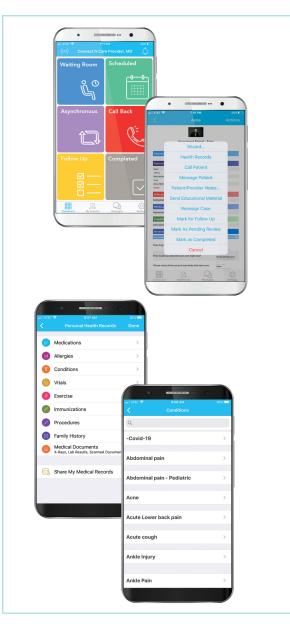

✓ Balance your clinicians' resources

How it Works

Providers:
Download the app or access the browser-based portal online, then specify the type of visit they are available for (call back, video, scheduled appointments, waiting room).

Patients:
Download the app, sign in to create an account, and then report symptoms and either get a call back, enter the virtual waiting room or schedule a visit.

Connect N'Care™ Features

- Live video (multi-party) or phone visits

- Asynchronous telemedicine encounters

- Evidence-based medical intake process

- Integration with E-prescriptions

- Provider availability and scheduling

- Secure text, image and video messaging

- 20 built-in protocols to treat common conditions

- Design own protocols and customize for individual patients

- Nurse triage and scheduling

- Easily customizable features and private branding

- Multiple payment processing models

- Analytics and administrative dashboard

- Built-in patient resources including: Personal Health Record Management, educational material by Merck, medication content from Up-To-Date

- HIPAA compliant

- Supports iOS, Android and Desktop Browsers
