

Pexip Room Connector Bundle

Simplify video collaboration for any meeting room & maximize your existing hardware infrastructure.

Many organizations are now using multiple video collaboration solutions and hardware, such as Microsoft Teams or Google Hangouts Meet, alongside their existing traditional video conferencing room systems (SIP/H.323 devices).

But with this mix, it can often be difficult for users to remember multiple joining workflows for different hardware setups and meeting types. Remove user complexity and expand the capabilities of your meeting rooms with the Pexip Room Connector Bundle.

Each meeting room bundle includes everything you need to connect your room:

Include your preferred interoperability integration:

Pexip for Microsoft Teams

Dial into your Microsoft Teams from standards-based video systems (SIP/H323 devices)

Pexip for Google Hangouts Meet

Dial into your Google Hangouts meetings from standards-based video systems (SIP/H323 devices)

Premium Pexip Endpoint Subscription

Includes call control, phonebook management, and Skype for Business interoperability. Register and provision your video conferencing systems on the Pexip Service's dedicated video network with quality assured performance.

- **Manage your organization's migration to the cloud:** if your organization needs to maintain some endpoint devices on your existing internal call-control solution, you have the option to replace the endpoint subscription license with a Trusted Device license. You can then migrate devices onto dedicated endpoint subscriptions with native call-control when you're ready.
- **Trusted Devices** are not registered to the Pexip Service, but are recognized as internal devices when calling into your Microsoft Teams or Google Hangouts Meetings. They will enter meetings directly, automatically bypassing the lobby page used for guest participants, who require an internal user to admit them into the meeting.

Pexip Virtual Meeting Room (VMR)

Enable any device to join meetings held in a dedicated video meeting room.

Pexip One — Touch Join

Join any type of video meeting with the push of a button.

Domain hosting

Match your organization's video calling domains to your company email for familiar dialing addresses.

Offered as SaaS solution deployed as part of the Pexip Service.

If your organization prefers self-hosted deployment, Pexip Infinity's software licensing options can be used to create meeting room bundles with the same Microsoft and Google interoperability solutions.
